Brazos

FIBER

**Why Fiber?
One word....Bandwidth!**

What is fiber?

Fiber is made up of tiny strands of glass that use light to carry data. This data travels much like it did on traditional copper lines, except that fiber allows larger amounts of bandwidth for delivery of cutting edge services.

Fiber is the best internet option available.

Fiber to the premise (FTTP) offers more bandwidth, increased reliability, and flexibility than other options at a similar price.

For over 60 years, Brazos has provided the best in telecommunications services.

To learn more about the many benefits of Brazos Fiber contact us today at 1.800.687.3222 or 940.564.5659.
